

The follow steps can be used to bypass the certificate pinning used by the August Smart phone app without needing to jailbreak the device.

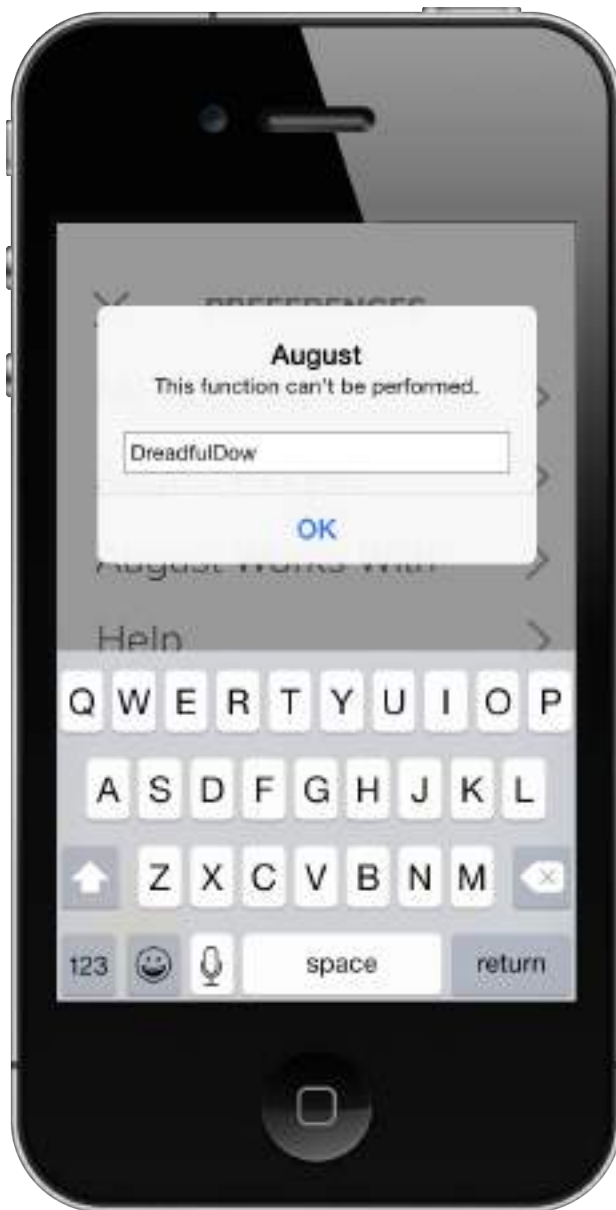

Step 1: Open settings

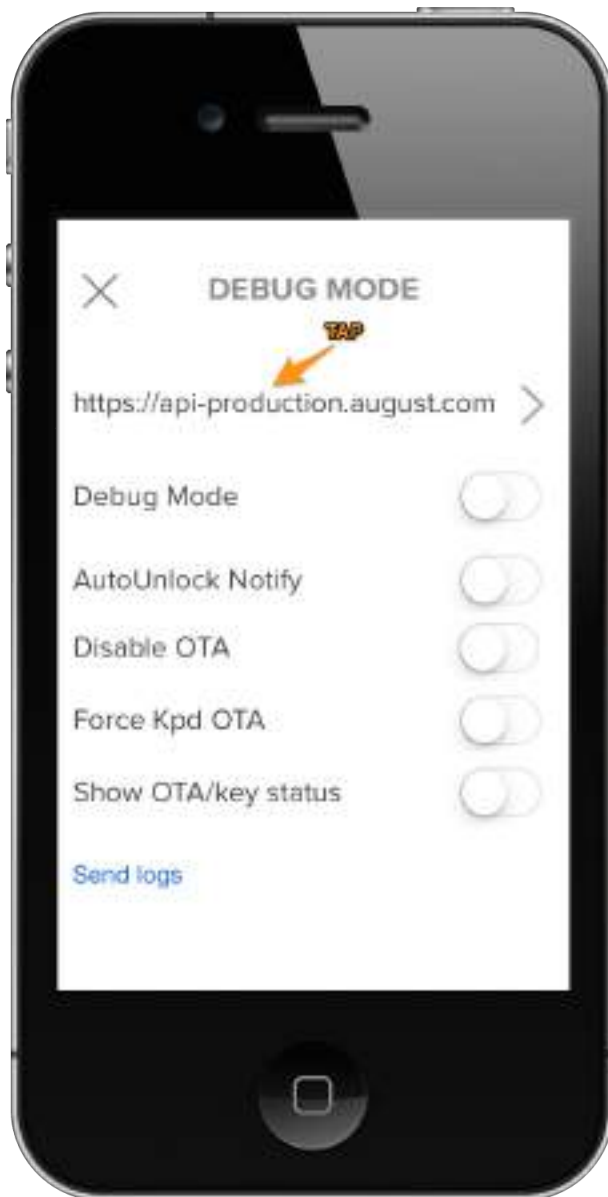

Step 2: Press and hold the application version number.

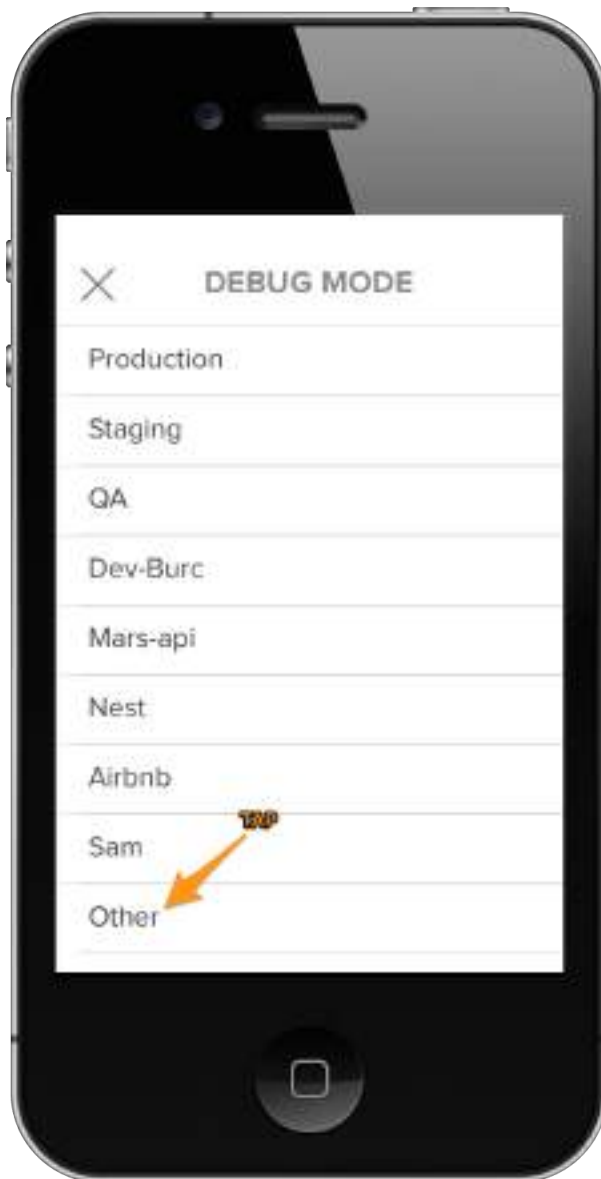

Step 3: Enter "DreadfulDow" in the prompt. The prompt is case sensitive.

Step 4: Tap on <https://api-production.august.com> to change webservice the application will use.

Step 5: Tap other to specify a custom url.

Step 6: Enter url of server you control which can relay requests to August's server. (Both HTTP and HTTPS can be used.)

Step 7: Monitor to, modify, and otherwise mess with traffic between the app and the August services.
